

## AFTER SCHOOL CLASSES NOW ENROLLING!

### Session Theme: Transportation Timeline

Whether your child is new to LEGO® Bricks or is already an experienced builder, our proprietary lesson plans and model kits allow students of all ages to build machines and watch their motorized constructions come to life!

What will your child learn? Before your child begins to build, a brief lesson will provide the history of the model and its relevance to life today. In this session we will be learning about different modes of transportation from the horse and buggy to trains to the development of the automobile and flight. Our projects, designed by engineers and architects, motivate children by reinforcing S.T.E.M. based principles while enhancing self-esteem, improving fine motor skills, and teaching important math skills. Our LEGO models use axles, pulleys, gears and are fully MOTORIZED.

All models and lessons are tailored toward your child's age. Each student will take home a custom mini figure at the end of the session. New models will be built each class – no repeat lessons or builds from previous sessions will be used.

REGISTRATION THROUGH  
BRICKS 4 KIDZ WEB SITE ONLY
